

# Malta Weather

It is the warm and inviting climate that has made the Maltese Islands an important tourist resort in the centre of the Mediterranean. There are no harsh winds, fog, snow or frost. Rain falls only for very short periods, averaging about 20 inches annually. There are only two seasons in Malta: the mild winter season and the dry summer season. The average temperature in winter is 14°C, while in summer the average is 23°C although during the height of summer (mid July – mid September), temperatures regularly reach over 30°C. The spring and autumn months are a perfect time to visit Malta, when the weather is at its best. If you are visiting Malta during the winter months (November - April) it is advisable to pack some warm clothes including a thick jacket, as it gets quite cold, especially at night. If you plan to visit during the summer months (May – October) you do not need any thick clothes, however it is advisable to bring a light jacket as it gets quite chilly in the evenings. During the peak summer months (July - September) make sure to bring your bathing suit, as well as shorts and sleeveless tops. If you plan to visit certain places of interest such as churches, do not forget to bring along the appropriate clothing.
